DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Susan Mack on November 23, 2010.

The application has been amended as follows:

1. Cancel claims 17-21, 24-27, 30 and 32-34.

EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

Applicant's amendments to the claims, arguments and drawings filed September 15, 2010 has been fully considered. In light of the Applicant's amendments, arguments, and unexpected results, claims 1, 6-8, 10-16, 29, 35 and 36 are allowed and renumbered to claims 1-14.

In light of the replacement drawings being satisfactory, the drawing object is withdrawn.

In light of the Applicant's arguments, amendment to the claims and unexpected results, all previous 35 U.S.C. 103(a) rejections are withdrawn.

The following is an examiner's statement of reasons for allowance: The claims 1, 6-8, 10-16, 29, 35 and 36 are drawn to a method of treating cerebral infarction comprising parenterally administering between about 100 mg to about 2,00 mg of (2R)-2-propyloctanoic acid for about 0.5 to about 3 hours once a day for a period of treatment lasting from 1 to 100 days. There is no prior art disclosing the applicant's administration method, particularly from about 0.5 to about 3 hours once a day. The closest art is Tateishi et al. (Journal of Cerebral Blood Flow & Metabolism, June 2002, vol. 22, no. 6, pp. 723-734). Tateishi et al. show that there is a significant increase in the infarct volume between 24 and 168 hours after pMCAO, which closely resembles the time course of infarct expansion in human stroke (see page 723, column 2, paragraph 2). Tateishi et al. teach that (R)-(-)-2-propyloctanoic acid (ONO-2506) leads to mitigation of delayed infarct expansion and early improvement of neurologic deficits (i.e. treatment of cerebral infarction; see title; addresses claims 1, 29 and 35). ONO-2506 also significantly reduced the expression of S-100 β (see abstract, lines 3-4 and 11-12; addresses claim 16). The rats were administered intravenously 1mg/kg, 3 mg/kg or

10mg/kg daily, in which significantly reduced the infarct volume at 168 hours (i.e. continuous intravenous administration for 7 days; 700 mg if an average human at 70 kg; 3 mg if a rat at 300 g or 0.3 kg; see page 725, column 1, determination of the optimal dose of ONO-2506 experiment 1; Figure 1; and page 727, column 1, the therapeutic time window of ONO-2506: experiment 4; addresses claims 1, 6, 7, 9-15 and 35). Since, the method of Tateishi et al. is an administration of ONO-2506 at 0.42 mg/kg/h the Applicant's have demonstrated that at 4 mg/kg/h patients do not experience death (see figure 2), thus providing unexpected results. Therefore, the Applicant's have provided administration of ONO-2506 at a high dose for a period of time lasting about 3 hours or less, which provides much better efficacy and avoids death of the patient.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kendra D. Carter whose telephone number is (571) 272-9034. The examiner can normally be reached on 9:30 am - 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sreeni Padmanabhan can be reached on (571) 272-0629. The fax phone
